Heavy Metals in Dry Film of Paint

On 5th of February 2025, Eurofins Product Testing Denmark A/S received a sample of a paint with the product name:

FONDO PIGMENTATO

supplied by

Colori Decora Srl

The heavy metals in dry film of paint were tested according to the Italian CAM Edilizia Decree DM 23 Giugno 2022 n. 254, GURI n. 184 del 8 agosto 2022 section 2.5.13 b section.

Testing and evaluation were performed according to ISO 17294:2024 [LC-ICP-MS] for chromium and EPA 3052 mod. [ICP-MS] for arsenic, cadmium, lead, mercury and selenium. (see the test report no. 392-2025-00057505_XN_EN).

Evaluation of heavy metals in dry film of paint result according to Italian CAM:

- Single heavy metal concentrations of cadmium, lead, hexavalent chromium, mercury, arsenic and selenium is below 0.010 % by weight in dry paint on the tested sample.
